Praise Maduka

Front-End Developer · React · TypeScript · WordPress

Lagos, Nigeria · madukapraise15@gmail.com · github.com/the-blockman

Summary

Front-end developer who has run a production WordPress site for 5+ years, covering hosting, DNS, SSL, Cloudflare and performance, and who builds tested React applications. Designs interfaces in Figma and implements them in code. B.Tech in Marine Engineering, CGPA 9.05/10.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, PHP, Python, Java, C++, SQL (MySQL)
- **Front-end:** React, React Router, Context API, Zustand, Tailwind CSS, Vite, Webpack, responsive design
- **Testing:** Vitest, Jest, React Testing Library
- **Tools and deployment:** Git and GitHub (branching workflows), Vercel, Netlify, Cloudflare Pages, ESLint, Prettier, Google Apps Script
- **WordPress and web operations:** Custom post types, PHP snippets, theme customization, Elementor, Slider Revolution, The Events Calendar, cPanel, DNS, SSL, Cloudflare, LiteSpeed Cache, SEO
- **Design:** Figma (auto layout), Photoshop, Illustrator, CapCut
- **Currently learning:** Next.js

Experience

Website Administrator and WordPress Developer · CFAM Church (cfamchurch.org) · 5+ years

- Run the church's production WordPress site end to end: hosting, DNS, SSL, Cloudflare configuration and performance.

- Built a Sermons section from scratch: a custom post type with a speaker taxonomy, a single-sermon template with responsive video, and a scrollable More Sermons carousel (PHP, CSS).
- Built a Locations page with service times and an embedded Google Map, and styled single event pages with CSS where Pro plugin features were not available.
- Diagnosed and fixed a hosting suspension caused by resource overuse: added LiteSpeed Cache, enabled gzip, optimized the database and replaced the default WordPress cron with a 15-minute server cron job. The account was reinstated.
- Traced stale styling on live pages to an outdated Cloudflare-cached stylesheet and fixed it by purging the cache.
- Configure and maintain plugins, customize the site with CSS, and carry out SEO work.

Projects

Shopping Cart · React, React Router, Context API, Vitest, React Testing Library, Vercel · Live · Code

- Built a multi-page store with routing, products fetched from the FakeStore API, and cart state shared through Context and a custom useCart hook.
- Added add, remove and quantity controls with a live cart count and total, plus loading skeletons and error handling.
- Wrote unit tests with Vitest and React Testing Library and deployed the responsive UI on Vercel.

Church Attendance Check-in System · Google Apps Script, JavaScript, HTML/CSS, Google Sheets

- Built an internal web app for volunteers to check attendees in against a register of about 3,000 people, replacing paper-based attendance.
- Redesigned data access after the first version took 25 seconds to respond: read only the columns needed, moved filtering to native Sheets formulas and cached lookups, making it fast enough to use at the door.
- Implemented fuzzy, phonetic name search and tested it on the real register.
- Automated the weekly attendance column with a scheduled trigger and supported two door stations writing to one master sheet.

WeatherApp · JavaScript (ES6+), Webpack, Visual Crossing API, Netlify · Live · Code

- Fetched live conditions for any city from a REST API with async/await, loading each icon through dynamic imports so only the one needed is requested.
- Added loading and error states for invalid searches and localStorage to remember the last city.
- Configured separate Webpack dev and prod builds with ESLint and Prettier.

CFAM Church Website (React) · React, React Router, Tailwind CSS, Vite, Git · In progress

- Building a multi-page church website with a small team from a Figma design, using branch-based Git workflows on GitHub.
- Built diagonal hero sections with CSS clip-path.

Also built: Memory Card (React, PokeAPI) · Quiz App (React, Open Trivia DB) · CV Application (React, live-preview editor) · Basketball Scoreboard (JavaScript)

UI/UX and Design

- Design interfaces from scratch in Figma using auto layout, then implement them in code: Personal Portfolio and Hometown Homepage prototypes.
- Create flyers, posters and logos in Illustrator and Photoshop, edit video, and have done freelance promotional and documentary graphics including image processing and background removal.

Education

B.Tech, Marine Engineering · Centurion University of Technology and Management (CUTM), Bhubaneswar, India · Graduated May 2026 · CGPA 9.05/10

Coursework: Python, Java, Robotics (C++), Database Management (MySQL), Strength of Materials, Advanced Metrology, Jigs and Fixtures, Reverse Engineering

Front-End Engineering · ALX Africa

Built React projects including a quiz app, a GitHub user search app, a recipe sharing app and a basketball scoreboard.

Full Stack JavaScript Curriculum · The Odin Project

Self-directed curriculum covering JavaScript, React, Git and testing, with projects such as a Todo List, Library app, WeatherApp, Memory Card and Shopping Cart.
